1 Introduction

1.1 Purpose

This Business Requirements Document (BRD) defines the business objectives, scope, and high-level requirements for **WorxForge**, a centralized enterprise platform for creating, discovering, managing, and sharing reusable knowledge assets. It translates the business need into a structured set of requirements to guide design, development, and stakeholder sign-off.

1.2 Background

Organizations accumulate valuable reusable knowledge, such as prompts, coding standards, templates, and process documentation, that is often scattered across teams and difficult to discover or reuse consistently. This platform addresses that gap by providing a single, searchable repository with collaboration and quality-control features, improving consistency and reducing duplicated effort across teams.

1.3 Business Objectives

- Centralize reusable knowledge assets in a single, discoverable repository.
- Increase reuse of existing organizational knowledge and reduce duplicated work.
- Improve consistency and quality of shared knowledge assets through review and feedback mechanisms.
- Enable collaboration and knowledge transfer across teams and roles.
- Provide administrative oversight to maintain content quality and platform integrity.

2 Scope

2.1 In Scope

- User registration, authentication, and personalized dashboards.
- Creation, editing, publishing, and versioning of knowledge assets.
- Search, filtering, sorting, and browsing of knowledge assets.
- Personal libraries, following, bookmarking, and recently accessed assets.
- Commenting, feedback, and asset recommendations.
- Administrative management of users, assets, and content moderation.
- Usage analytics and quality indicators for assets.

2.2 Out of Scope

- Integration with external third-party knowledge or AI tools beyond the platform's own asset library (unless separately specified).

3 Stakeholders

Stakeholder	Interest / Role
End Users (Contributors)	Create, publish, and maintain knowledge assets; consume and reuse assets shared by others.
End Users (Consumers)	Search, discover, and reuse existing knowledge assets in their own work.
Administrators	Manage users and content, monitor platform activity, and enforce quality and access policies.
Project / Development Team	Design, build, and maintain the platform according to the agreed requirements.
Organizational Leadership	Sponsor the initiative and evaluate its impact on knowledge reuse and collaboration.

4 Business Requirements

4.1 User Authentication & Personalized Dashboard

- The platform shall provide secure user authentication.
- The platform shall present a personalized dashboard showing recommended, featured, trending, and recently accessed assets.
- The platform shall provide notification indicators and quick navigation to major modules.

4.2 Knowledge Asset Management

- Users shall be able to create, edit, and publish knowledge assets.
- Assets shall support rich metadata: title, description, type, domain, tags, compatible tools, and version.
- Users shall be able to preview assets before publishing.

4.3 Knowledge Discovery

- The platform shall support full-text search across asset content and metadata.
- Users shall be able to filter by domain, category, asset type, compatible tools, and tags.
- Users shall be able to sort results by relevance, recency, popularity, and quality.
- Users shall be able to browse assets without providing a search query.

4.4 Personal Library

- Users shall be able to save and organize favorite assets.
- Users shall be able to view recently used assets.
- Users shall be able to access assets from users or assets they follow.

4.5 Asset Details & Interaction

- Users shall be able to view complete asset information and supporting documentation.
- Users shall be able to download or copy reusable content where applicable.

- Users shall be able to bookmark and follow assets.
- Users shall be able to submit feedback and comments.
- Users shall be able to view related and recommended assets.

4.6 Collaboration

- The platform shall support feedback and discussion through comments.
- Users shall be able to follow assets to receive future updates.
- The platform shall promote knowledge sharing across the organization.

4.7 Administration

- Administrators shall have dashboards to manage users, assets, comments, suggestions, and reports.
- Administrators shall be able to create, update, and delete users and platform content.
- Administrators shall be able to monitor platform activity and maintain content quality.

4.8 Security & Access Control

- The platform shall enforce role-based authorization so users only access permitted assets.
- Visibility shall be restricted to published content for general users.
- The platform shall prevent unauthorized access to restricted resources.

4.9 Content Organization

- Assets shall be categorized by domain, type, use case, and tags.
- The platform shall maintain standardized asset summaries and consistent presentation.
- The platform shall support version tracking and publication status management.

4.10 Analytics & Quality

- The platform shall display asset quality and usage indicators.
- The platform shall record user engagement for auditing and analytics.
- The platform shall support recommendations based on user interests and organizational relevance.

4.11 System Reliability & User Experience

- The platform shall preserve search context and navigation history between pages.
- The platform shall provide informative empty states and error messages.
- The platform shall support pagination or incremental loading for large datasets.
- The platform shall keep displayed content synchronized with the latest published assets.

5 Assumptions and Constraints

5.1 Assumptions

- Users have valid organizational credentials or email addresses for registration.
- Knowledge assets are primarily text-based or lightweight reusable artifacts.
- The organization has the infrastructure to support a centralized, searchable repository.

5.2 Constraints

- The system must enforce role-based access control to protect restricted content.
- Published content must remain consistent and synchronized across all views.
- The platform must scale to support large volumes of assets and concurrent users.

6 Success Criteria

- Increased reuse of published knowledge assets, measured via engagement and download/copy metrics.
- Reduction in duplicated or redundant knowledge artifacts across teams.
- Active participation in collaboration features (comments, follows, feedback).
- Administrators are able to maintain content quality with minimal manual overhead.
